Preface	xi
0 Combinatorial Games	1
0.1 Basic Terminology	3
Problems	7
1 Basic Techniques	11
1.1 Greedy	11
1.2 Symmetry	14
1.3 Change the Game!	16
1.4 Parity	17
1.5 Give Them Enough Rope!	17
1.6 Strategy Stealing	19
1.7 Case Study: Long Chains in Dots & Boxes	21
Problems	29
2 Outcome Classes	35
2.1 Game Positions and Options	36
2.2 Impartial Games: Minding Your \mathcal{P} s and \mathcal{N} s	41
2.3 Case Study: Partizan Endnim	43
Problems	47
3 Motivational Interlude: Sums of Games	51
3.1 Sums	51
3.2 Comparisons	53
3.3 Equality and Identity	57
3.4 Case Study: Domineering Rectangles	59
Problems	62

4	The Algebra of Games	65
4.1	The Fundamental Definitions	65
4.2	Games Form a Group with a Partial Order	74
4.3	Canonical Form	78
4.4	Incentives	83
	Problems	83
5	Values of Games	87
5.1	Numbers	87
5.2	A Few All-Smalls: Up, Down, and Star	100
5.3	Switches	105
5.4	Tiny and Miny	108
5.5	Case Study: Toppling Dominoes	110
	Problems	112
6	Structure	117
6.1	Games Born by Day 2	117
6.2	Extremal Games Born By Day n	119
6.3	Stops	123
6.4	More About Numbers	125
6.5	The Distributive Lattice of Games Born by Day n	127
6.6	Group Structure	130
	Problems	130
7	Impartial Games	135
7.1	A Star-Studded Game	136
7.2	The Analysis of Nim	138
7.3	Adding Stars	140
7.4	A More Succinct Notation	142
7.5	Taking-and-Breaking Games	144
7.6	Subtraction Games	145
	Problems	155
8	Hot Games	159
8.1	Comparing Games and Numbers	160
8.2	Coping with Confusion	163
8.3	Cooling Things Down	166
8.4	Strategies for Playing Hot Games	173
8.5	Norton Products	175
	Problems	180

Contents	ix
9 All-Small Games	185
9.1 Cast of Characters	185
9.2 Motivation: The Scale of Ups	193
9.3 Equivalence Under \star	193
9.4 Atomic Weight	197
9.5 All-Small Shove	201
9.6 More Toppling Dominoes	202
9.7 Clobber	203
Problems	207
ω Further Directions	211
ω .1 Transfinite Games	211
ω .2 Algorithms and Complexity	212
ω .3 Loopy Games	213
ω .4 Kos: Repeated Local Positions	214
ω .5 Top-Down Thermography	214
ω .6 Enriched Environments	215
ω .7 Idempotents	215
ω .8 Misère Play	215
ω .9 Dynamical Systems	216
A Top-Down Induction	219
A.1 Top-Down Induction	219
A.2 Examples	220
A.3 Why is Top-Down Induction Better?	224
A.4 Strengthening the Induction Hypothesis	226
A.5 Inductive Reasoning	227
Problems	228
B CGSuite	231
B.1 Installing CGSuite	231
B.2 Worksheet Basics	232
B.3 Programming in CGSuite's Language	235
B.4 Inserting a Newline in CGSuite	237
B.5 Programming in Java for CGSuite	237
C Solutions to Exercises	239
D Rulesets	263
Bibliography	277
Index	281
