Foreword	xix
Preface	xxiii
1. The Fixed-Function Graphics Pipeline	1
The Traditional View	1
The Vertex Pipeline	2
The Triangle-Rendering Part of the Pipeline	5
State in the Graphics Pipeline	6

How the Traditional View is Implemented	7
Vertex Processing	8
Rendering Processing	10
Homogeneous Coordinates in the Fixed-Function Pipeline	14
Vertex Arrays	16
Conclusions	20
Exercises	21
2. Fundamental Shader Concepts	23
History of Shaders	25
Shaders in the Graphics Pipeline	28
Vertex Shaders	30
A Warning on Shader Code Efficiency	34
Fragment Shaders	34
Geometry Shaders	36
The GLSL Shading Language	38
Exercises	42
3. Using <i>glman</i>	45
Using <i>glman</i>	46
Loading a GLIB File	47
Editing GLIB and Shader Source Files	47
GLIB Scene Creation	48
Window and Viewing	48
Transformations	48
Defining Geometry	49
Specifying Textures	52

Specifying Shaders	52
Miscellaneous	53
Specifying Uniform Variables	54
Examples of GLIB Files	56
More on Textures and Noise	57
Using Textures	57
Using Noise	59
Functions in the <i>glman</i> Interface Window	60
Generating and Displaying a Copy of Your Scene	60
Global Scene Transformation	61
Eye Transformation	61
Texture Transformation	61
Object Picking and Transformation	62
Monitoring the Frame Rate	62
Miscellaneous	63
Exercises	63
4. The GLSL Shader Language	65
Factors that Shape Shader Languages	66
Graphics Card Capabilities	66
Parallellism in Graphics Cards	67
The Need to Support Graphics Operations	67
Built-In Data	68
General GLSL Language Concepts	68
Extended Function and Operator Capabilities	69
New Functions	69
New Variable Types	70
New Function Parameter Types	70
Language Details	70
Omitted Language Features	71
New Matrix and Vector Types	72

Functions Extended to Matrices and Vectors	74
Operations Extended to Matrices and Vectors	74
New Functions	79
Name Sets	87
Swizzle	87
New Data Types	88
New Function Parameter Types	95
Shared Namespaces	95

What's Coming in GLSL Version 1.30 **96**

Deprecation	96
New Functionality in GLSL1.30	97

Summary **97**

Exercises **98**

5. Lighting **101**

The ADS Lighting Model **101**

The ADS Lighting Model Function	103
---------------------------------	-----

Kinds of Lights **104**

Positional Lights	105
Directional Lights	106
Spot Lights	106

Setting Up Lighting for Shading **108**

Flat Shading	108
Smooth (Gouraud) Shading	109
Phong Shading	110
Anisotropic Shading	111

Exercises **112**

6. Vertex Shaders **113**

Vertex Shaders in the Graphics Pipeline **114**

Input to Vertex Shaders	114
Output from Vertex Shaders	116
Fixed-Function Processing After the Vertex Shader	120
The Relation of Vertex Shaders to Geometry Shaders	120
Replacing Fixed-Function Graphics with Vertex Shaders	120
Standard Vertex Processing	121
Going Beyond the Fixed-Function Pipeline with Vertex Shaders	122
Vertex Modification	122
Dome Geometry Example	122
Issues in Vertex Shaders	125
Exercises	127
7. Fragment Shaders and Surface Appearance	129
Basic Function of a Fragment Shader	130
Inputs to Fragment Shaders	130
Particularly Important Varying Variables	132
Coordinate Systems	133
Fragment Shader Processing	135
Outputs from Fragment Shaders	135
Replacing Fixed-Function Processing with Fragment Shaders	135
Shading	135
Traditional Texture Mapping	137
False Coloring	137
What Follows a Fragment Shader?	139
Additional Shader Effects	140
Discarding Pixels	140
Phong Shading	140

Exact Shading	141
Anisotropic Shading	143
Data-Driven Coloring	144
Exercises	146
<hr/>	
8. Texture Mapping in Fragment Shaders	147
<hr/>	
Texture Coordinates	147
<hr/>	
Traditional Texture Mapping	148
<hr/>	
GLSL Texture Mapping	149
<hr/>	
The Texture Context	151
Standard Texture Operations	151
Samplers	153
Textures	153
<hr/>	
Procedural Textures	154
Bump Mapping	159
Cube Maps	166
Render to Texture	170
<hr/>	
Exercises	174
<hr/>	
9. Noise	177
<hr/>	
Fundamental Noise Concepts	178
<hr/>	
Three Types of Noise: Value, Gradient, and Value+Gradient	179
Cubic and Quintic Interpolation	180
Noise Equations	180
Other Noise Concepts	184
<hr/>	
Fractional Brownian Motion (FBM, 1/f, Octaves)	184
Noise in Two and Three Dimensions	185
Using Noise with <i>glman</i>	187
Turbulence	188

Some Examples of Noise in Different Environments	190
Marble Shader	192
Cloud Shader	193
Wood Shader	195
Advanced Noise Topics	197
Using <i>noisegraph</i>	197
Exercises	199
10. Image Manipulation with Shaders	201
Basic Concepts	202
Single-Image Manipulation	203
Luminance	203
CMYK Conversions	204
Hue Shifting	207
Image Filtering	210
Image Blurring	210
Chromakey Images	212
Stereo Anaglyphs	213
3D TV	217
Edge Detection	220
Embossing	221
Toon Shader	223
Artistic Effects	225
Image Flipping, Rotation, and Warping	226
The Image Blending Process	231
Blending an Image with a Constant Base Image	232
Color Negative	232
Brightness	233
Contrast	234
Blending an Image with a Version of Itself	235
Saturation	235
Sharpness	236

Blending Two Different Images	237
Dissolve	238
Other Combinations	239
Notes	242
Exercises	242
11. Geometry Shader Concepts and Examples	247
What Does the Geometry Shader Do?	248
New Adjacency Primitives	250
New OpenGL API Functions	251
New GLSL Variables and Variable Types	254
Communication Between a Vertex Shader and a Geometry Shader	254
Normals in Geometry Shaders	257
Examples	257
Bézier Curves	257
Shrinking Triangles	259
Sphere Subdivision	261
3D Object Silhouettes	265
Exercises	267
12. The OpenGL API	269
Shaders in the OpenGL Programming Process	269
Handling OpenGL Extensions	270
How Is a GLSL Shader Created?	271
Creating and Compiling Shader Objects	272
The CheckGLErrors Function	275

Creating, Attaching, Linking, and Activating Shader Programs	276
Creating a Shader Program and Attaching Shader Objects	276
Linking Shader Programs	276
Activating a Shader Program	278
Passing Data into Shaders	279
Application-Defined Uniform Variables	279
Application-Defined Per-Vertex Attribute Variables	282
A C++ Class to Handle Shader Program Creation	285
Exercises	286
13. Using Shaders for Scientific Visualization	289
<hr/>	
Image-Based Visualization Techniques	290
Image Negative	290
Image Edge Detection	291
Toon Rendering	292
Hyperbolic Geometry	292
<hr/>	
3D Scalar Data Visualization	295
Point Clouds	297
Cutting Planes	300
Volume Probe	304
Direct Volume Rendering	305
Transfer Functions	311
<hr/>	
Passing in Data Values with Your Geometry	317
<hr/>	
Flow Visualization	318
2D Line Integral Convolution	318
3D Line Integral Convolution	320
Extruding Objects for Streamlines	323

Geometry Visualization	326
Silhouettes	326
Hedgehog Plots	327
Exercises	330
14. Serious Fun	335
Light Interference	336
Diffraction Gratings	337
Oil Slicks	340
Lens Effects	343
Atmospheric Effects	347
Rainbows	348
The Glory	352
Fun with One	355
Using the <i>glman</i> Timer Function	357
Disco Ball	357
Fog, With and Without Noise	359
Algorithmic Art	361
An Explosion Shader	363
Exercises	365
A. GLSL Program Class Source Code	369
The Header File	370
The Program Body	371

References	383
