Contents

Preface	vii
Acknowledgements	xv
1 Plane Curves: Local Properties	1
1.1 Parametrizations	1
1.2 Position, Velocity, and Acceleration	10
1.3 Curvature	20
1.4 Osculating Circles, Evolutes, and Involutives	27
1.5 Natural Equations	34
2 Plane Curves: Global Properties	39
2.1 Basic Properties	39
2.2 Rotation Index	43
2.3 Isoperimetric Inequality	51
2.4 Curvature, Convexity, and the Four-Vertex Theorem	53
3 Curves in Space: Local Properties	61
3.1 Definitions, Examples, and Differentiation	61
3.2 Curvature, Torsion, and the Frenet Frame	68
3.3 Osculating Plane and Osculating Sphere	78
3.4 Natural Equations	84
4 Curves in Space: Global Properties	87
4.1 Basic Properties	87
4.2 Indicatrices and Total Curvature	89
4.3 Knots and Links	97

5	Regular Surfaces	107
5.1	Parametrized Surfaces	107
5.2	Tangent Planes and Regular Surfaces	114
5.3	Change of Coordinates	130
5.4	The Tangent Space and the Normal Vector	134
5.5	Orientable Surfaces	138
6	The First and Second Fundamental Forms	145
6.1	The First Fundamental Form	145
6.2	The Gauss Map	160
6.3	The Second Fundamental Form	166
6.4	Normal and Principal Curvatures	177
6.5	Gaussian and Mean Curvature	189
6.6	Ruled Surfaces and Minimal Surfaces	197
7	The Fundamental Equations of Surfaces	209
7.1	Tensor Notation	210
7.2	Gauss's Equations and the Christoffel Symbols	237
7.3	Codazzi Equations and the Theorema Egregium	245
7.4	The Fundamental Theorem of Surface Theory	255
8	Curves on Surfaces	259
8.1	Curvatures and Torsion	260
8.2	Geodesics	270
8.3	Geodesic Coordinates	285
8.4	Gauss-Bonnet Theorem and Applications	297
8.5	Intrinsic Geometry	320
	Bibliography	325
	Index	327
